

Reg. Section 1.183-2

Activity not engaged in for profit defined

(a) In general. For purposes of section 183 and the regulations thereunder, the term "activity not engaged in for profit" means any activity other than one with respect to which deductions are allowable for the taxable year under section 162 or under paragraph (1) or (2) of section 212. Deductions are allowable under section 162 for expenses of carrying on activities which constitute a trade or business of the taxpayer and under section 212 for expenses incurred in connection with activities engaged in for the production or collection of income or for the management, conservation, or maintenance of property held for the production of income. Except as provided in section 183 and §1.183-1, no deductions are allowable for expenses incurred in connection with activities which are not engaged in for profit. Thus, for example, deductions are not allowable under section 162 or 212 for activities which are carried on primarily as a sport, hobby, or for recreation. The determination whether an activity is engaged in for profit is to be made by reference to objective standards, taking into account all of the facts and circumstances of each case. Although a reasonable expectation of profit is not required, the facts and circumstances must indicate that the taxpayer entered into the activity, or continued the activity, with the objective of making a profit. In determining whether such an objective exists, it may be sufficient that there is a small chance of making a large profit. Thus it may be found that an investor in a wildcat oil well who incurs very substantial expenditures is in the venture for profit even though the expectation of a profit might be considered unreasonable. In determining whether an activity is engaged in for profit, greater weight is given to objective facts than to the taxpayer's mere statement of his intent.

(b) Relevant factors. In determining whether an activity is engaged in for profit, all facts and circumstances with respect to the activity are to be taken into account. No one factor is determinative in making this determination. In addition, it is not intended that only the factors described in this paragraph are to be taken into account in making the determination, or that a determination is to be made on the basis that the number of factors (whether or not listed in this paragraph) indicating a lack of profit objective exceeds the number of factors indicating a profit objective, or vice versa. Among the factors which should normally be taken into account are the following:

(1) Manner in which the taxpayer carries on the activity. The fact that the taxpayer carries on the activity in a businesslike manner and maintains complete and accurate books and records may indicate that the activity is engaged in for profit. Similarly, where an activity is carried on in a manner substantially similar to other activities of the same nature which are profitable, a profit motive may be indicated. A change of operating methods, adoption of new techniques or abandonment of unprofitable methods in a manner consistent with an intent to improve profitability may also indicate a profit motive.

(2) The expertise of the taxpayer or his advisors. Preparation for the activity by extensive study of its accepted business, economic, and scientific practices, or consultation with

those who are expert therein, may indicate that the taxpayer has a profit motive where the taxpayer carries on the activity in accordance with such practices. Where a taxpayer has such preparation or procures such expert advice, but does not carry on the activity in accordance with such practices, a lack of intent to derive profit may be indicated unless it appears that the taxpayer is attempting to develop new or superior techniques which may result in profits from the activity.

(3)The time and effort expended by the taxpayer in carrying on the activity. The fact that the taxpayer devotes much of his personal time and effort to carrying on an activity, particularly if the activity does not have substantial personal or recreational aspects, may indicate an intention to derive a profit. A taxpayer's withdrawal from another occupation to devote most of his energies to the activity may also be evidence that the activity is engaged in for profit. The fact that the taxpayer devotes a limited amount of time to an activity does not necessarily indicate a lack of profit motive where the taxpayer employs competent and qualified persons to carry on such activity.

(4)Expectation that assets used in activity may appreciate in value. The term "profit" encompasses appreciation in the value of assets, such as land, used in the activity. Thus, the taxpayer may intend to derive a profit from the operation of the activity, and may also intend that, even if no profit from current operations is derived, an overall profit will result when appreciation in the value of land used in the activity is realized since income from the activity together with the appreciation of land will exceed expenses of operation. See, however, paragraph (d) of §1.183-1 for definition of an activity in this connection.

(5)The success of the taxpayer in carrying on other similar or dissimilar activities. The fact that the taxpayer has engaged in similar activities in the past and converted them from unprofitable to profitable enterprises may indicate that he is engaged in the present activity for profit, even though the activity is presently unprofitable.

(6)The taxpayer's history of income or losses with respect to the activity. A series of losses during the initial or start-up stage of an activity may not necessarily be an indication that the activity is not engaged in for profit. However, where losses continue to be sustained beyond the period which customarily is necessary to bring the operation to profitable status such continued losses, if not explainable, as due to customary business risks or reverses, may be indicative that the activity is not being engaged in for profit. If losses are sustained because of unforeseen or fortuitous circumstances which are beyond the control of the taxpayer, such as drought, disease, fire, theft, weather damages, other involuntary conversions, or depressed market conditions, such losses would not be an indication that the activity is not engaged in for profit. A series of years in which net income was realized would of course be strong evidence that the activity is engaged in for profit.

(7)The amount of occasional profits, if any, which are earned. The amount of profits in relation to the amount of losses incurred, and in relation to the amount of the taxpayer's investment and the value of the assets used in the activity, may provide useful criteria in

determining the taxpayer's intent. An occasional small profit from an activity generating large losses, or from an activity in which the taxpayer has made a large investment, would not generally be determinative that the activity is engaged in for profit. However, substantial profit, though only occasional, would generally be indicative that an activity is engaged in for profit, where the investment or losses are comparatively small. Moreover an opportunity to earn a substantial ultimate profit in a highly speculative venture is ordinarily sufficient to indicate that the activity is engaged in for profit even though losses or only occasional small profits are actually generated.

(8)The financial status of the taxpayer. The fact that the taxpayer does not have substantial income or capital from sources other than the activity may indicate that an activity is engaged in for profit. Substantial income from sources other than the activity (particularly if the losses from the activity generate substantial tax benefits) may indicate that the activity is not engaged in for profit especially if there are personal or recreational elements involved.

(9)Elements of personal pleasure or recreation. The presence of personal motives in carrying on of an activity may indicate that the activity is not engaged in for profit, especially where there are recreational or personal elements involved. On the other hand, a profit motivation may be indicated where an activity lacks any appeal other than profit. It is not, however, necessary that an activity be engaged in with the exclusive intention of deriving a profit or with the intention of maximizing profits. For example, the availability of other investments which would yield a higher return, or which would be more likely to be profitable, is not evidence that an activity is not engaged in for profit. An activity will not be treated as not engaged in for profit merely because the taxpayer has purposes or motivations other than solely to make a profit. Also, the fact that the taxpayer derives personal pleasure from engaging in the activity is not sufficient to cause the activity to be classified as not engaged in for profit if the activity is in fact engaged in for profit as evidenced by other factors whether or not listed in this paragraph.

(c)Examples. The provisions of this section may be illustrated by the following examples:

Example (1). The taxpayer inherited a farm from her husband in an area which was becoming largely residential, and is now nearly all so. The farm had never made a profit before the taxpayer inherited it, and the farm has since had substantial losses in each year. The decedent from whom the taxpayer inherited the farm was a stockbroker, and he also left the taxpayer substantial stock holdings which yield large income from dividends. The taxpayer lives on an area of the farm which is set aside exclusively for living purposes. A farm manager is employed to operate the farm, but modern methods are not used in operating the farm. The taxpayer was born and raised on a farm, and expresses a strong preference for living on a farm. The taxpayer's activity of farming, based on all the facts and circumstances, could be found not to be engaged in for profit.

Example (2). The taxpayer is a wealthy individual who is greatly interested in philosophy. During the past 30 years he has written and published at his own expense several pamphlets, and he has engaged in extensive lecturing activity, advocating and disseminating his ideas. He has made a profit from these activities in only occasional years, and the profits in those years were small in relation to the amount of the losses in

all other years. The taxpayer has very sizable income from securities (dividends and capital gains) which constitutes the principal source of his livelihood. The activity of lecturing, publishing pamphlets, and disseminating his ideas is not an activity engaged in by the taxpayer for profit.

Example (3). The taxpayer, very successful in the business of retailing soft drinks, raise dogs and horses. He began raising a particular breed of dog many years ago in the belief that the breed was in danger of declining, and he has raised and sold the dogs in each year since. The taxpayer recently began raising and racing thoroughbred horses. The losses from the taxpayer's dog and horse activities have increased in magnitude over the years, and he has not made a profit on these operations during any of the last 15 years. The taxpayer generally sells the dogs only to friends, does not advertise the dogs for sale, and shows the dogs only infrequently. The taxpayer races his horses only at the "prestige" tracks at which he combines his racing activities with social and recreational activities. The horse and dog operations are conducted at a large residential property on which the taxpayer also lives, which includes substantial living quarters and attractive recreational facilities for the taxpayer and his family. Since (i) the activity of raising dogs and horses and racing the horses is of a sporting and recreational nature, (ii) the taxpayer has substantial income from his business activities of retailing soft drinks, (iii) the horse and dog operations are not conducted in a businesslike manner, and (iv) such operations have a continuous record of losses, it could be determined that the horse and dog activities of the taxpayer are not engaged in for profit.

Example (4). The taxpayer inherited a farm of 65 acres from his parents when they died 6 years ago. The taxpayer moved to the farm from his house in a small nearby town, and he operates it in the same manner as his parents operated the farm before they died. The taxpayer is employed as a skilled machine operator in a nearby factory, for which he is paid approximately \$8,500 per year. The farm has not been profitable for the past 15 years because of rising costs of operating farms in general, and because of the decline in the price of the produce of this farm in particular. The taxpayer consults the local agent of the State agricultural service from time-to-time, and the suggestions of the agent have generally been followed. The manner in which the farm is operated by the taxpayer is substantially similar to the manner in which farms of similar size, and which grow similar crops in the area are operated. Many of these other farms do not make profits. The taxpayer does much of the required labor around the farm himself, such as fixing fences, planting, crops, etc. The activity of farming could be found, based on all the facts and circumstances, to be engaged in by the taxpayer for profit.

Example (5). A, an independent oil and gas operator, frequently engages in the activity of searching for oil on undeveloped and unexplored land which is not near proven fields. He does so in a manner substantially similar to that of others who engage in the same activity. The chances, based on the experience of A and others who engaged in this activity, are strong that A will not find a commercially profitable oil deposit when he drills on land not established geologically to be proven oil bearing land. However, on the rare occasions that these activities do result in discovering a well, the operator generally realizes a very large return from such activity. Thus, there is a small chance that A will make a large profit from his oil exploration activity. Under these circumstances, A is engaged in the activity of oil drilling for profit.

Example (6). C, a chemist, is employed by a large chemical company and is engaged in a wide variety of basic research projects for his employer. Although he does no work for

his employer with respect to the development of new plastics, he has always been interested in such development and has outfitted a workshop in his home at his own expense which he uses to experiment in the field. He has patented several developments at his own expense but as yet has realized no income from his inventions or from such patents. C conducts his research on a regular, systematic basis, incurs fees to secure consultation on his projects from time to time, and makes extensive efforts to "market" his developments. C has devoted substantial time and expense in an effort to develop a plastic sufficiently hard, durable, and malleable that it could be used in lieu of sheet steel in many major applications, such as automobile bodies. Although there may be only a small chance that C will invent new plastics, the return from any such development would be so large that it induces C to incur the costs of his experimental work. C is sufficiently qualified by his background that there is some reasonable basis for his experimental activities. C's experimental work does not involve substantial personal or recreational aspects and is conducted in an effort to find practical applications for his work. Under these circumstances, C may be found to be engaged in the experimental activities for profit.
